SharCC_PMSe for External

Tool Installation Description

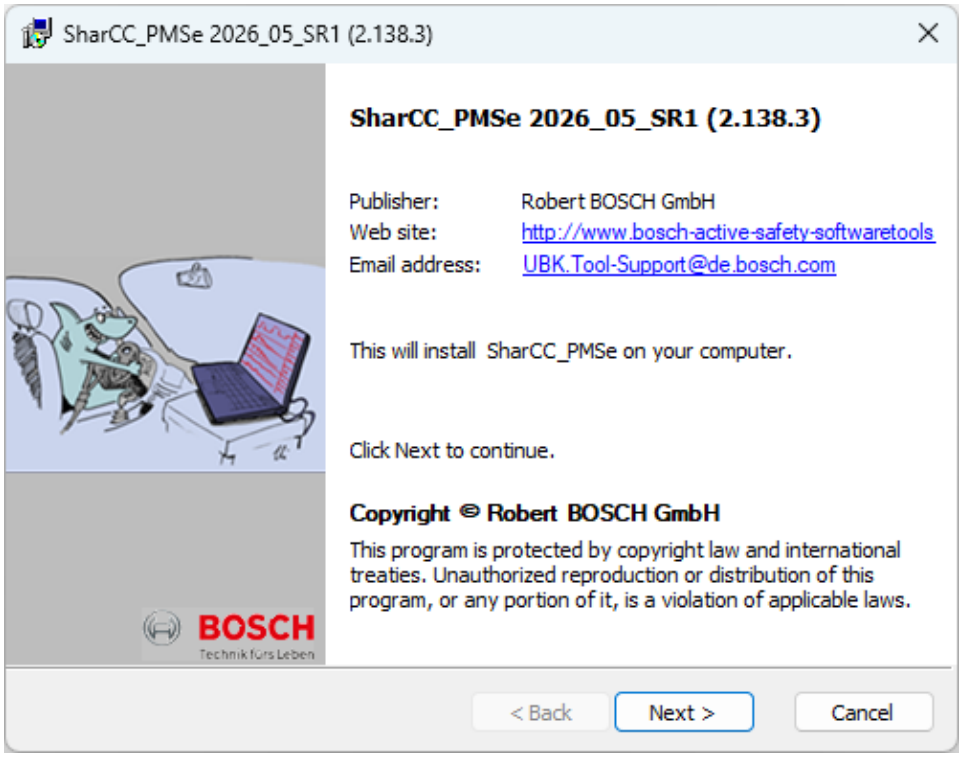

This software is protected by Wibu CodeMeter.

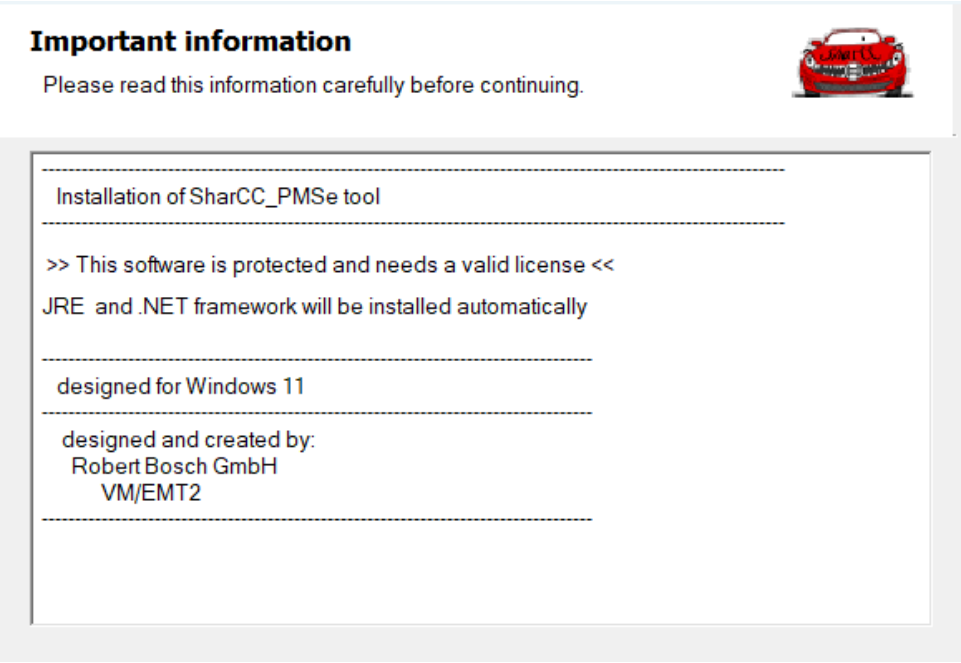

A valid license is required (Dongle)!

(For further information, see "WiBu Codemeter Dongle" documentation)

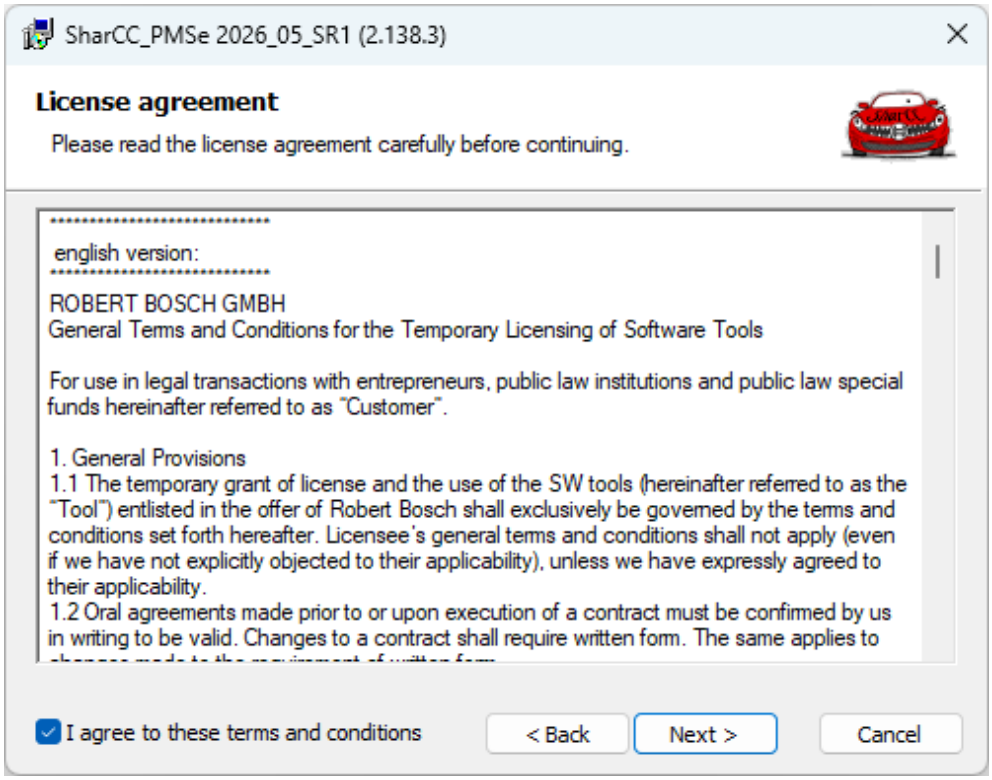

Start the *SharCC_PMSe_64bit-Setup.exe* installation manually. If the installation node is connected to the Internet, the required .NET version will be downloaded automatically. If no Internet connection is available, the required .NET package must be installed manually.

>> Press **Next >** to continue or **Cancel** to abort the installation.

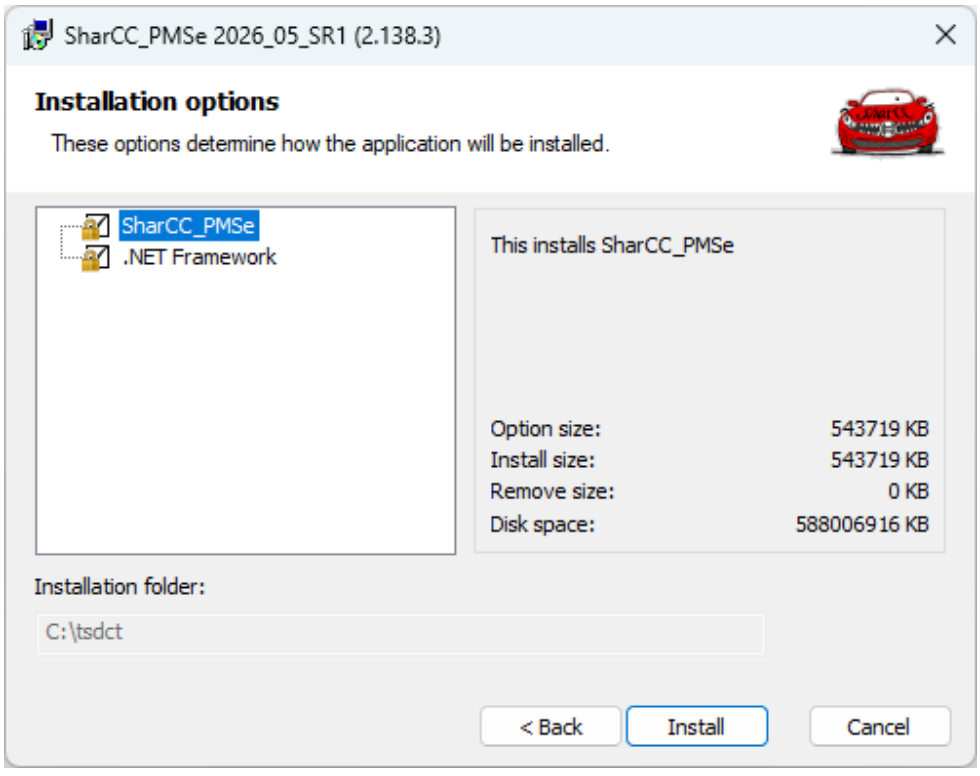

>> Press **Next >** to continue or **Cancel** to abort the installation.

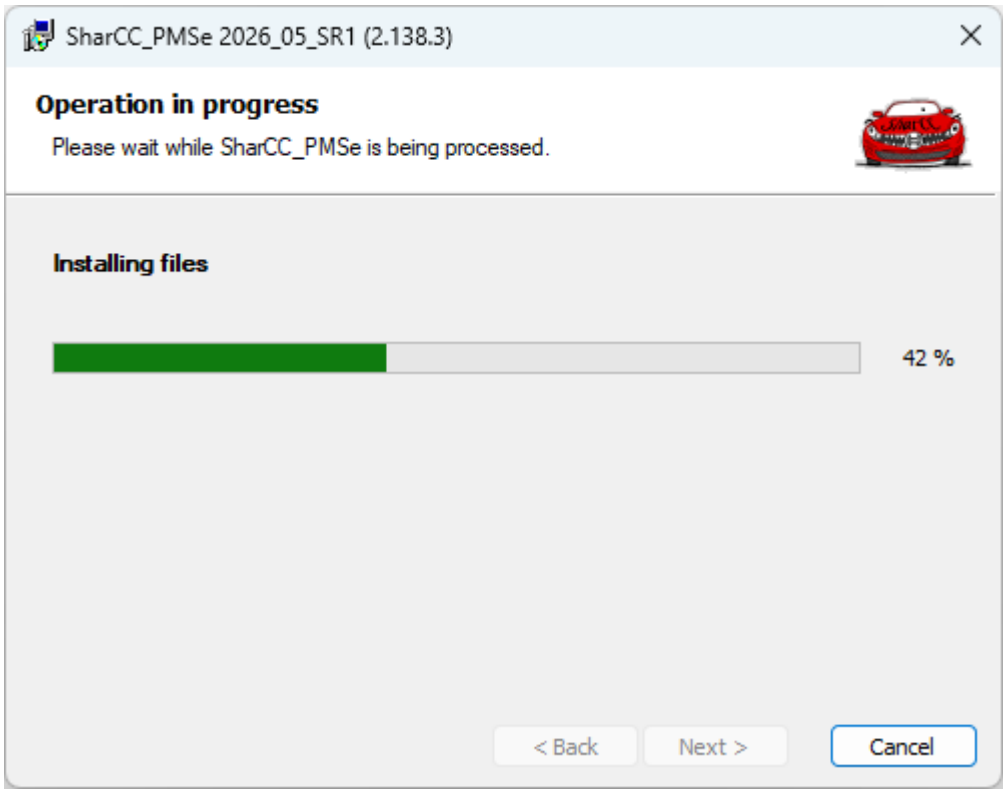

>> Accept the license terms and press **Next >** to continue or **Cancel** to abort the installation. If you do not agree to the license terms, you must cancel the installation.

The installation folder is preselected.

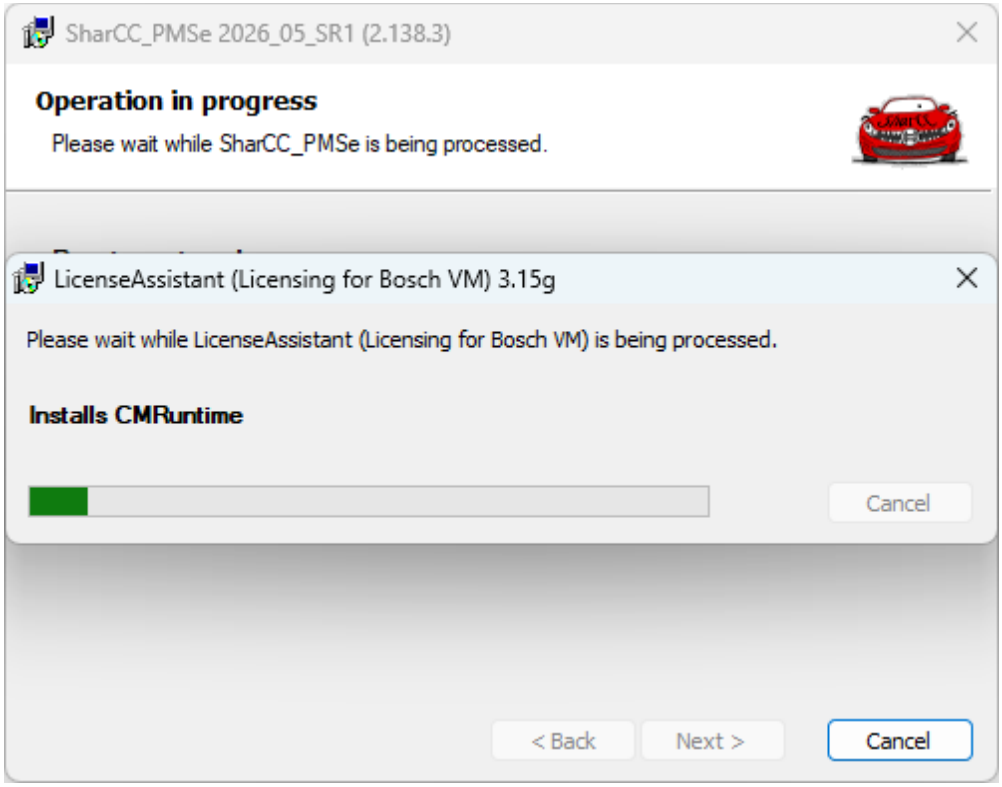

>> Press **Install** to continue or **Cancel** to abort the installation.

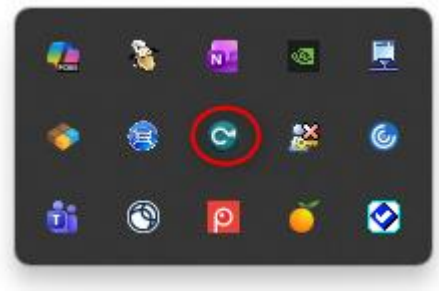

The installation process starts and the required files are copied.

>> On non-Bosch computers the Wibu CodeMeter Runtime software will also be installed. This software is necessary to handle the licensing on the connected dongle.

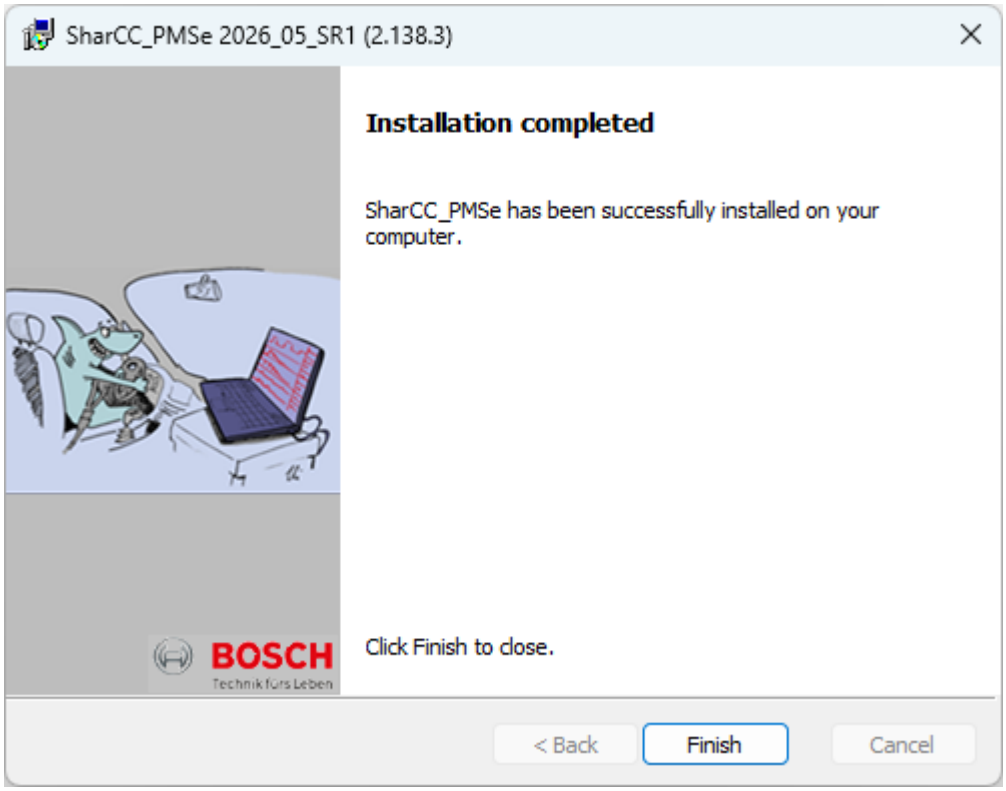

>> After plug on your License Dongle the correct installation is shown by the "CodeMeter" icon in the system menu:

>> The software does not work without valid License Dongle!! <<

After correct installation you get a success message:

Know Issues, Errata Handling, and product release expiry

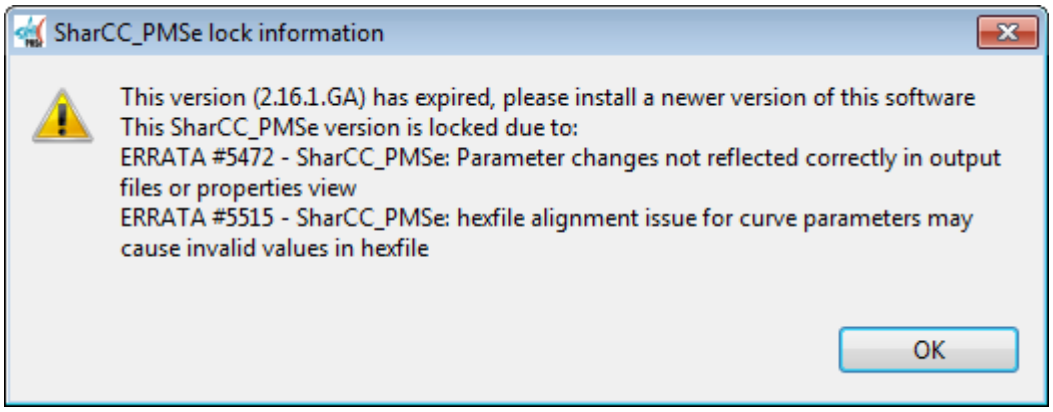

- Please also make sure to keep your external partner informed on known issues which affect the release - even those found and published at a later time.

- Please note that the Bosch associate who downloads and distributes the "SharCC_PMSe for externals" package to the external partner(s) is responsible to inform the external partner(s) on any SharCC_PMSe tool errata updates which might affect the product release and its usage, as the "SharCC_PMSe for externals" installations will not get the "live" errata updates that the internal SharCC_PMSe (PMSe) installations will receive and display on startup.

- Please note that "SharCC_PMSe for externals" installations will expire after a defined date (currently typically 6 months after package creation) in order to ensure that old releases affected by errata can no longer be used after this date, so make sure to download the release update or expiry extension in time before the existing installation expires. To give an idea on expiration date, latest SharCC_PMSe (PMSe) releases will show the expiration date in the "Menu=>About" dialog. Additionally, SharCC_PMSe (PMSe) releases will show an "expiring soon" warning message at program startup within 4 weeks before expiry.
  It is currently not planned to extend the regular expiration date beyond 6 months, as this will increase the risk of using an outdated product release affected by errata and other major bugs.

- The downloaded zip file must be unzipped to a temporary folder. It contains a 64-bit installation setup only - 32 bit is no longer supported.

- Example for a warning on expired SharCC_PMSe (PMSe) release:

- Please provide feedback on stability and bugs to UBK.Tool-Support@de.bosch.com SharCC Tool Support.
